

# IT service engineer

Join the team at Octavic and make an impact in industrial manufacturing operations management systems

Octavic's Industry 4.0 solution is quickly being adopted by the pharmaceutical, food & beverage, automotive, and other industries all around the world. To find out more about us, see <https://octavic.ro>.

Our aim is to change the industry landscape by using the latest technologies to reduce waste, achieve top efficiency in factories and improve people's daily work life.

We're looking for smart, inspiring individuals who are keen to get systems and customers up'n'running on Octavic's solution!

### What you'll do with us

- plan and prepare the installation of the Octavic system
- keep communication with clients during the whole lifecycle of system deployment and hyper-care period
- make the configuration and the deployment of the Octavic system
- provide occasional support to clients post-installation
- help shape and follow our technical roadmap and system architecture
- make sure the deployment process is documented and scalable
- daily support for the other development team members
- learn by doing and have autonomy and ownership in your actions

### About yourself

- you know how to configure an MS SQL server
- the Linux command line is not an alien for you
- you've studied some network architecture
- maybe you also have some hands-on experience in larger software projects deployments
- you're an analytic thinker and you understand business requirements
- you're a good communicator
- you're proactive and an independent worker – take action, move fast, break things!
- you're focused on self-improvement

If you find yourself in the above, reach out to us via [office@octavic.ro](mailto:office@octavic.ro). We'd love to get a coffee together to know each other.

Let's start changing the digital industrial landscape!
